Subject Siltronic, Western Supplemental EIB Injection Area

Hello James.

DEQ reviewed the "Western Supplemental EIB Injection Grid – Siltronic Corporation" dated March 6, 2009 (March 6th Letter). The document provides the results of additional push-probe drilling and sampling work conducted by Siltronic to further assess the extent of TCE in groundwater at concentrations exceeding 11,000 ug/L. Based on the results of this sampling and observations made during preparatory activities (air-knifing), the March 6th Letter also provides recommendations for expanding the Western Supplemental injection grid.

We discussed the March 6th Letter during a telephone call on April 13th. Based on the telephone discussion, DEQ understands the revised Western Supplemental grid shown by Figure 1, has been expanded as far as practicable to the northwest (site west) given site access restrictions (i.e., subsurface utilities) and underground obstructions (i.e., former building footing).

DEQ provided approval of the revised Western Supplemental grid shown by Figure 1 during the April 13th call. This e-mail provides written approval of the revised grid.

Please contact me if you have questions regarding this e-mail.

Mr. Dana Bayuk, Project Manager

Cleanup & Portland Harbor Section

Oregon Department of Environmental Quality
